Summary:

Third-year student at the Faculty of Computers and Artificial Intelligence, Hurghada University , aiming to specialize in machine learning for embedded and resource-constrained devices (TinyML). Team leader with hands-on experience in relational database design and SQL, currently building solid foundations in C++ and Python, and an active participant in national and international tech competitions.

Education:

[Sep 2024 – Jun 2028]

B.Sc., Faculty of Computers and Artificial Intelligence — Hurghada University, Egypt

- GPA: 3.82 / 4.0

- Intended specialization: Artificial Intelligence

Projects:

Hospital Management System ([project link](#))

[November 2025-Present]

(Team Leader · University course project · 6-member team)

- Led a 6-member team through the full project lifecycle, including requirements gathering, database design, implementation, and delivery.
- Designed the ERD and a normalized relational schema consisting of 12 interconnected tables using Microsoft SQL Server
- Defined primary and foreign key relationships and wrote SQL queries for data insertion, retrieval, and multi-table joins.

Technical Skills:

- **Programming:** C++ (fundamentals), Python (basics), SQL
- **Databases:** Visual Studio (Database Development Environment — ERD design, relational modeling, multi-table queries.
- **Core strengths:** Team leadership, project coordination, problem solving.

Experience:

• **NASA Space Apps Challenge_Hurghada :**

[(4-5)October2025]

(International hackathon, participant)

Chellange:[Stellar Stories: Space Weather Through the Eyes of Earthlings](#)

- Worked with a team of 3 members to create an educational project about **space weather** and how it affects life on Earth.
- Helped make a simple animated story and a presentation to explain scientific ideas in an easy and fun way for children.
- Presented the project to a judging panel and improved my teamwork, presentation, and communication skills.

CodeAlpha – IoT Internship (In Progress) :**[10 july-present]**

- Developing IoT projects and completing practical tasks using simulation tools.
- Learning IoT applications, sensors, and embedded systems concept.

Innov Egypt Program (In Progress) :**[21 july-present]**

- Participating in entrepreneurship and innovation training.
- Developing business, teamwork, and problem-solving skills.
